Ambien is a sedative-hypnotic medication given to treat short-term insomnia or sleeping disorders.

How does Ambien work on the brain?

Ambien pills work on the receptor cells in the brain that confine GABA. These brain receptors are responsible for good sleeping patterns. Ambien affects these brain cells and can make you sleep faster, having a good night's sleep. You can [buy Ambien online](#) with Paypal or other gateways easily.

Does Ambien have any side effects the next day?

Ambien pills can cause side effects the next day after you wake up. Some common side effects are:

Dizziness

Headaches

Stomach pain

Feeling weakness

Muscle pain

Contact your doctor if any of these side effects persist for a long time or get worse.

These side effects can get serious like :

Memory loss

Aggressive behavior

Suicidal thoughts

Mood changes

Contact your doctor immediately if you feel these severe side effects, especially suicidal thoughts or complete mood changes.

Does Ambien make depression worse?

Though [Ambien pills](#) do not seem to affect depression, their primary purpose is to make people sleep tightly. But in some cases, Ambien pills have shown side effects that can worsen depression but are not expected.

Some of the side effects of Ambien include behavior changes and can produce anxiety. It is not necessary to affect depression after taking Ambien. However, if you [buy Ambien pills online](#) or from a pharmacist, contact your doctor if you feel these side effects.

Is Ambien bad for Kidney disease?

Ambien does not seem to have a direct effect on the kidneys. But taking Ambien for long durations may increase CKD (Chronic kidney disorders) risk. Therefore, Ambien 5mg and Ambien 10mg are the most prescribed dosage, and do not attempt to increase the dosage for Ambien pills.

What happens if you take Ambien for years?

[Ambien pills](#) are usually prescribed for short-term treatment, and it does not have such adverse or dependency effects if used for short durations. However, if taken for years, Ambien pills create dependency effects with time. In addition, after stopping consumption, it may generate withdrawal symptoms for some time.

In some cases, if taken for long durations, the medication may stop working after a specific time. Contact your doctor for further consultation.
