Let us get to know more about tramadol. First question being, Is tramadol an opiate?

Firstly, [Tramadol is a pain killer](#) that comes under the category of synthetic opioids. Which is not actually an opioid but still works like an opioid. Furthermore, it acts upon the Central Nervous System (CNS) to relieve moderate to moderately severe pain. It is used as a pain reliever for adults as well as children. This comes in two forms such as an immediate-release form and an extended-release form. Both of these forms depend upon the condition of the symptoms and the age of the patient or sufferer.

Is Tramadol a Controlled Substance?

Tramadol contains all the properties of an opioid. Thus, it is a controlled substance. The Drug Enforcement Administration (DEA) has declared tramadol as an opioid and a controlled substance. It is the most popular medication used to treat a long withstanding pain. And is only available with a prescription. Furthermore, it is available in the form of a liquid suspension, tablet, drops, capsules, and dissolve-in-mouth tablets.

Can you take Ibuprofen with Tramadol?

If your doctor has prescribed you to [buy tramadol online](#), then you must know that both tramadol and ibuprofen act extremely well as a painkiller. And doctors advise not to take two painkillers at the same time. Additionally, ibuprofen works well in treating fever and mild cold.

Can you take Tylenol with Tramadol?

Tylenol is just another name for tramadol. The formulation of both the medications is almost the same. Plus, doctors strictly prohibit taking two medications at the same time. If we talk about the tramadol dosage, it depends upon various factors such as the age, sex, medical condition of an individual. Furthermore, Taking two opioids or synthetic opioids together could show adverse effects on a person.

Talking about the side effects of tramadol, these include:

- Nausea
- Constipation
- Lightheadedness
- Headache
- Drowsiness
- Dizziness
- Vomiting

These are considered as the normal side effects. And if an individual starts taking tramadol more than prescribed, then they are bound to face adverse side effects of this medication.
