If your doctor has prescribed you to [buy Xanax online](#), then make sure to do thorough research about it and then buy it from a registered online pharmacy.

How Long Does Xanax Stay In Your System?

Xanax is a short-acting benzodiazepine. Which is a class of drugs that are known to treat anxiety and other symptoms related to mental health disorders. If an individual takes a Xanax

pill, then the levels of its existence can be found in the bloodstream after around one to two hours. Xanax's average half-life in the blood is around one to two hours later. In adults, the half-life of [Xanax stays](#) for about 11.2 hours in young healthy adults. Furthermore, half of the drug is already metabolized and gets eliminated through the urine in that time frame.

Additionally, it takes more than five half-lives for 99% of Xanax to clear the body. Also, Xanax takes around two to three days to get completely eliminated from the body. However, Xanax can be detected depending upon the variety of certain individual factors. And it is cleared from various parts of the body at different rates.

Blood: 24 hours

Hair: 90 days

Saliva: 2.5 days

Urine: 4 days

How Does Xanax Make You Feel?

The majority of the people who consume Xanax are either prescribed, non-prescribed, or take Xanax for recreational purposes. Furthermore, describe the feeling as calming or sedating after taking it.

Unlike other drugs, most common such as cocaine, which produces a euphoric feeling or gets you "high", Xanax makes an individual feel more relaxed, tired, and quiet. Such feelings may lead to an individual falling asleep or maybe passing out for some hours.

Some of the Xanax users have also reported the issue of having a loss of memory as well as blacking out for a few minutes and failing to remember what happened some moments ago. Higher dosage can have a stronger impact on the individual's condition.

Is Xanax an Opioid?

No! Xanax is not an opioid. It comes in the class of drugs called benzodiazepines. Also known as benzos, they act as sedatives that help individuals treat symptoms of anxiety and other mental health disorders. Opioids, on the other hand, help an individual relieve pain from moderate to severe pain as well as acute to chronic pain.

Ativan VS Xanax

If we talk about [Ativan VS Xanax](#), both of them come under the class of drugs called benzodiazepines. They both are used to treat anxiety and other medical disorders. Both of the

drugs are equally effective in working towards the wellbeing of an individual. Xanax has a quick onset of action and it takes around four to six hours and ativan comes with the onset action of eight hours.
