Client Users

Learn More About **OpenLogic ERP Framework**

## Structure Engine

DataNote's base source code consists of core features, add-ons and dedicated modules for food, beverage and bakery manufacturing industry. In other words, the structure engine is the heart, soul and brain of the DataNote ERP software with API. Therefore, the structure engine can be used to quickly deploy a full-fledged ERP solution in your unit without any customization or changes. In conclusion, it can be said that the structure engine's code is the base for all the basic features and functions essential for food manufacturing ERP software.

## Logic Engine

DataNote has a special logic engine that is a one-of-its-kind engine introduced for the first time in any ERP software. DataNote Logic Engine allows manufacturers, distributors and companies to customize every aspect of the DataNote ERP software accordingly. As a result, one can personalize the user interface, simplify ERP processes, customize modules and do a lot more according to the customized operations of the unit. Hence, the ownership of the customized logic engine stays with you, always.
